DB-Like Packages and Installation Guide

The packages required to run our project are following:

1. NodeJS Prerequisites
2. NodeJS
3. Coffee-script
4. Git setup
5. Git Repository Clone

Below are installation and configuration steps for above packages:
It is highly recommended to update the Ubuntu OS before installing these packages using command

>sudo apt-get update

1. NodeJS Prerequisites
 >sudo apt-get install python-software-properties python g++ make

2. NodeJS
>wget http://nodejs.org/dist/v0.10.12/node-v0.10.12.tar.gz
>tar xzvf node-v0.10.12.tar.gz
>cd node-v0.10.12/
>./configure
>make
>sudo make install

3. Coffee-script:
>sudo npm -g install coffee-script

4. Git setup:
>sudo apt-get install git
>git config --global user.name "(github_username)"
>git config --global user.email "(github_email@example.com)"
>git config --global credential.helper cache
>git config --global credential.helper 'cache --timeout=36000'

5. Git Repository Clone:
>git clone https://github.com/whistler/DBLike.git
>cd DBLike
>sudo npm install
